

Please join us for a briefing on NPCA's most recent report "*Polluted Parks. How America is Failing to Protect Our National Parks, People and Planet from Air Pollution.*" This new air and climate report finds that 96 percent of the 417 national parks analyzed are experiencing significant levels of concern in at least one of four categories—climate change, harm to nature, hazy skies and unhealthy air. Come learn about how we got here and what this means for your parks.

**When: Wednesday, May 22<sup>nd</sup> at 3pm**

**Where: Environment and Public Works Committee Room—Dirksen 406**

**What: An overview of the state of our national park air quality**

**Refreshments served!**
